

Hotel Reservation System

1. Introduction

The purpose of this document is to analyze and define the requirements for a Hotel Reservation System. The system is designed to help hotels manage room bookings, customer information, payments, and room availability efficiently. It provides customers with an easy way to reserve rooms and enables hotel staff to manage reservations and hotel operations effectively.

2. Objectives

- Provide an online and offline room reservation facility.
- Maintain customer and booking records.
- Manage room availability and occupancy.
- Generate bills and payment receipts.
- Improve customer service and reduce manual work.
- Generate reports for hotel management.

3. Major Activities in the System

Customer Management

- Register new customers.
- Update customer information.
- Search customer records.
- View booking history

Room Management

- Add new rooms
- Update room detail
- View room availability
- Categorize rooms (Single, Double, Deluxe, Suite).

Reservation Management

- Book rooms
- Modify reservations
- Cancel reservations
- Check room availability for selected dates

Check-In and Check-Out Management

- Record guest check-in details
- Record guest check-out details
- Calculate stay duration
- Update room status automatically

Payment Management

- Generate bills
- Record payment details
- Support multiple payment methods
- Generate payment receipts

Staff Management

- Add employee details
- View staff records
- Update employee information
- Manage staff responsibilities

Report Generation

- Daily booking reports
- Monthly revenue reports
- Room occupancy reports
- Customer reservation reports

4. Functional Requirements

Module	Functionalities
CUSTOMER MANAGEMENT	Register, update, search, and view customer details
ROOM MANAGEMENT	Add, update, delete, and view room information
Reservation Management	Book, modify, cancel, and track reservations
Check-In/Check-Out	Manage guest arrival and departure
Payment Management	Generate bills, process payments, and print receipts
Staff Management	Add, update, delete, and view employee records

Module

Functionalities

Reports

Generate booking, revenue, occupancy, and customer reports

5. Non-Functional Requirements

Performance

- The system should respond quickly during room search and booking operations

Security

- Only authorized users should access hotel records
- Customer and payment information must be protected

Reliability

- The system should maintain accurate reservation and payment records

Scalability

- The system should support increasing numbers of rooms, customers, and bookings

Usability

- The interface should be simple, attractive, and easy to use for both customers and hotel staff

6. Conclusion

The Hotel Reservation System provides an efficient solution for managing hotel operations such as room reservations, customer records, check-in/check-out processes, payments, and report generation. The system improves operational efficiency, reduces paperwork, enhances customer satisfaction, and supports effective hotel management. This requirement analysis document serves as the foundation for the design and development of the Hotel Reservation System.
